Berkeley Alt: Meat Lab***

Food Chemistry Researcher

USE OF BIOINFORMATICS/CHEMICAL BIOLOGY TO EVALUATE NOVEL PLANT PROTEINS

We are searching for a curious student (preferable graduate), with extensive knowledge of protein chemistry to determine the functionality-structure relationship of well known animal proteins (e.g. egg, cheese). This will be used to explore if novel protein sources (rubisco, insect, fungal, etc) can match the desired functionalities for plant-based foods.

Application open until 8 p.m. 1/25/2021

Graduate and undergraduate students are welcome
